

Updated Unified Policy Proposal (for Review)

Date: 2025-11-08

Purpose

This proposal intentionally consolidates and revises policy language. Several clauses are borderline or cross-domain by design to trigger Human-in-the-Loop (HITL) review in Iteration 3.

Section 1 — Remote Work & Hours

1.1 Employees may work remotely up to FIVE (5) days per week at their discretion without prior manager approval,

provided their deliverables are unaffected. (Potential conflict with HR remote limits and 'prior approval' expectations.)

1.2 Core hours are flexible; teams may define their own overlap windows. (Potential conflict with fixed 9–5 requirement.)

Section 2 — Device Usage

2.1 Employees are permitted to use personally owned devices (including phones and laptops) for official work

when company MDM is installed; prior IT approval is not required if MDM compliance is met.

(Potential conflict with IT policy prohibiting personal device access without approval.)

Section 3 — Data Privacy & Third-Party Sharing

3.1 Employee data may be shared with contracted benefits providers and external compliance auditors as needed,

so long as the vendor's privacy posture is "industry standard". Advance HR consent is recommended but not required.

(Potential conflict with HR's prohibition on third-party sharing without explicit HR consent, and Compliance NDA expectations.)

3.2 For ad-hoc research collaborations, anonymized employee datasets may be shared externally without an NDA

if a senior manager approves. (Potential conflict with Compliance requirements for NDA before external sharing.)

Section 4 — Network & Security

4.1 VPN usage is encouraged for remote access; however, employees may access low-sensitivity systems without VPN

when using corporate SSO and MFA. (Potential conflict with IT requirement to use

corporate VPN for any remote access.)

Section 5 — Safety & Compliance

5.1 OSHA-aligned safety practices are recommended for all applicable roles; minor deviations are permissible

with manager sign-off. (Potential conflict with Compliance's mandatory adherence language.)

Notes to Reviewer (to stimulate HITL):

- The clauses above deliberately contain ambiguous qualifiers (“recommended”, “may”, “industry standard”).
- Expect the graph to enqueue review items for conflicts with: remote work limits, personal device usage, data sharing, NDA requirements, and VPN mandates.
